

Discussion

- In a cloud computing system (e.g., Amazon, Google cloud, etc), what are the trade-offs between consistency and availability you can think of? What is your strategy?
- Hint -> Things you might want to consider:
 - Different types of data (e.g., shopping cart, billing, product, etc.)
 - Different types of operations (e.g., query, purchase, etc.)
 - Different types of services (e.g., distributed lock, DNS, etc.)
 - Different groups of users (e.g., users in different geographic areas, etc.)
