Human-In-Loop: Wisdom of the Crowd

The Story of Kasparov Against The World

A 1999 Game of Chess over the Internet:

- Gary Kasparov (world chess champion) versus the Rest of The World (whose moves are decided by a majority vote)

- Kasparov was heavy favorite before game began.

- "Rest of The World" used on-line discussions, and inputs by five well-known chess experts, including a group called "The Computer Chess Team"

- Many weak players got hints from their home computers, which were notoriously poor at endgames.

Result: Kasparov won after 62 moves in four months.

Kasparov said it was the *hardest game he ever played*. This is one of the greatest moments in the AI Story and Human history.
